

## **PRESS RELEASE**

---

### **“ACHIEVING GOLD STANDARD IN PROJECT MANAGEMENT”**

**Saskatoon, Saskatchewan, January 30, 2009** – Clevor Technologies Inc. announces that it has developed a new approach for becoming the gold standard for project management.

Ravi Maithel, President of Clevor Technologies Inc. said, “Some time back he was asked by a senior manager of a large mining company if he could tell him what constitutes the gold standard in project management. At that time all he could say was that he was not familiar with any company that was happy with their project management performance. However, he thought that this was a very good question that should be answered,”

Ravi Maithel said that, “We are happy to announce that we are in the position to answer this question now.” It turns out that it is not enough to provide conceptual answers. What is possible is to start from where ever the company is and then continue to keep improving its performance both with the study of other people’s experience as well as one’s own experience. For more information, contact Clevor who will be willing to share their knowledge with your company and work with you to achieve the gold standard”

**About Clevor Technologies Inc.** Clevor Technologies Inc. have developed Clevor Project / Production Optimizer for construction companies; manufacturers and their maintenance operations; professional services companies and departments. Clevor Optimizer represents a true breakthrough in project / production management technology. It is a smart decision making tool that tells the managers, exactly what resources should be employed and when and who should do what and when so as to achieve the best results. This software tool use a patent - pending intelligent systems-based high performance optimization engine developed by Clevor and provides a compelling value for their users. Clevor also provides schedule building services and optimization services both for customers using MS Project and those using Primavera.
